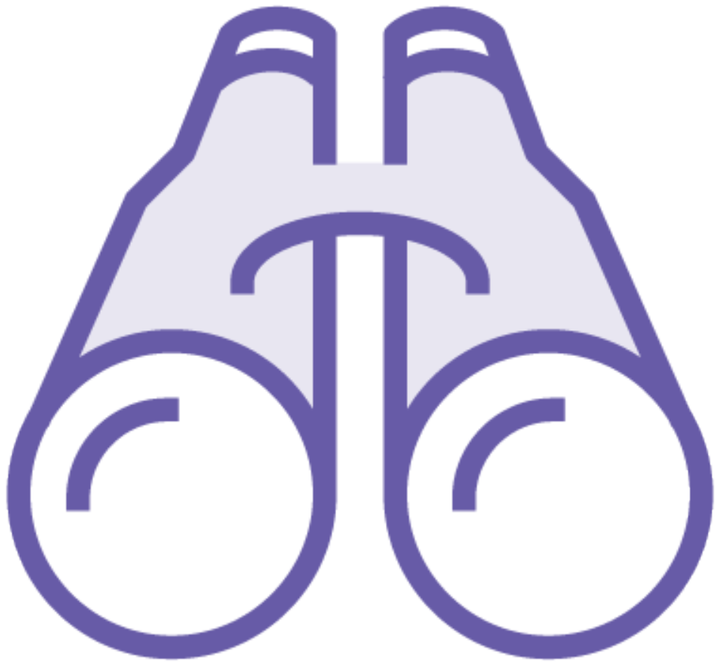
Views



Resolving a View

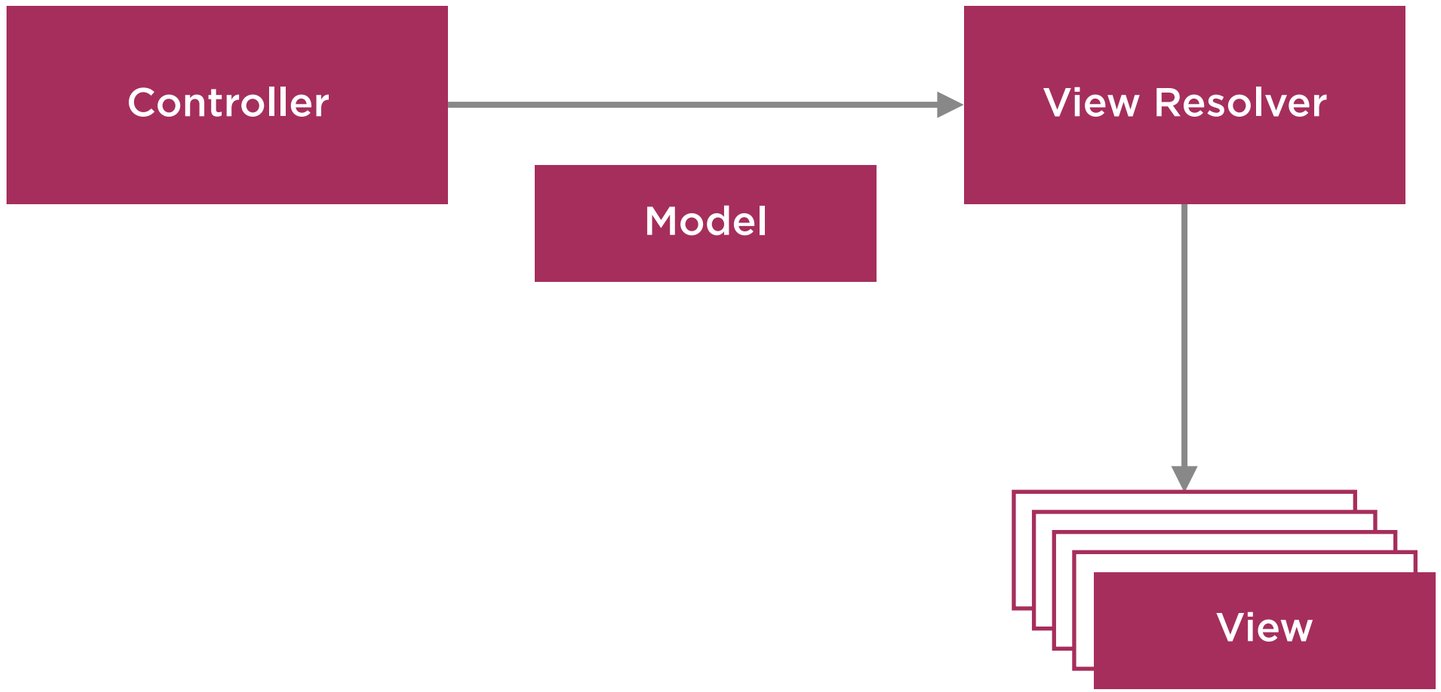
```
@Controller
public class RegistrationController {

  @GetMapping(“registration”)
  public String addRegistration (@ModelAttribute registration
  Registration registration) {

    System.out.println(“registration: “ + registration.getName());

    return “registration”;
  }
}
```

Resolving a View



Resolve Static Files

```
@Override
public void addResourceHandlers(ResourceHandlerRegistry registry) {
    registry
      .addResourceHandler("/files/**")
      .addResourceLocations(“/WEB-INF/pdf/“);
}
```
